

# Seed Bead Ring Design

Make this fun, flexible ring that will fit any size finger. For the center bead choose either a solid-colored bead, or something more decorative that complements the seed bead colors.

## Materials

- 20-gauge jewelry wire
- Wire cutters
- Pliers
- Seed beads
- One decorative bead

## Instructions

1. Measure out approximately 3 inches of wire and cut to size.
2. Grasp one end of the wire with the pliers and twist it firmly down onto itself to form a small loop that closes the end of the wire.
3. Slip seed beads onto the wire until you reach the midway point.
4. Place a larger or decorative bead onto the wire.
5. Continue filling in the wire with seed beads until you reach the end.
6. Grasp the end of the wire with the pliers and bend the point down onto itself to close the other end of the wire.
7. Hold one end of the wire tightly against the underside finger you plan on wearing the ring on.
8. Bend the wire firmly around the finger, twisting it so the decorative bead lands centered on the back of the finger.
9. Pull on both ends of the wire to tighten the shape of the ring. The ring is endlessly adjustable; make it larger or smaller by pulling on the center or the ends of the ring.
