

1. Lay the Foundation

The diagram shows a rectangular area defined by a double-line border, representing the foundation pad. Inside this rectangle, the text "poured concrete pad" is written. The area outside the rectangle is filled with short, curved lines, suggesting grass or ground. Four wooden stakes are positioned at the corners of the rectangle, with lines pointing to them from the label "stakes for support". One of the sides of the rectangle is labeled "2 x 6s", indicating the material used for the border.

2. Build the Base

This diagram illustrates the construction of the base for a wood storage unit. It shows a rectangular structure made of 1/2 size cinder blocks, with mortar applied between the blocks. The base is built on a concrete pad. A concrete hearth block is shown separately, intended to be placed on the concrete pad. A ledge is also indicated, likely for the wood storage unit to sit on.
