

Chemistry Feud

What method would a scientist use to test a theory?

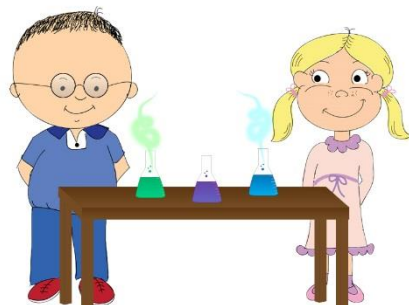

Survey says:

Scientific method – 10 points

Experiment – 5 points

Hypothesis – 2 points

Observation – 2 points

What is the first element you find on the modern periodic table?

Survey says:

Hydrogen – 10 points

H (abbreviation for Hydrogen) – 5 points

What are the three states of matter?

Survey says:

Solid – 10 points

Liquid – 10 points

Mass – 10 points

Which elements are liquids at room temperature?

Survey says:

Mercury – 10 points

Bromine – 10 points

Gallium – 2 points (if held in hand it melts)

What are different elements named after?

Survey says:

Specific scientist name – 10 points

Person who discovered element – 5 points

Place – 5 points

Name any of the 8 noble metals, metals that resist corrosion or oxidation

Survey says:

Ruthenium – 10 points

Rhodium – 10 points

Palladium – 10 points

Silver – 10 points

Osmium – 10 points

Iridium – 10 points

Platinum – 10 points

Gold – 10 points

Abbreviation of any of the above – 5 points

Name one of the noble gases, also called inert gases

Survey says:

Helium – 10 points

Neon – 10 points

Argon – 10 points

Krypton – 10 points

Xenon – 10 points

Radioactive radon – 10 points

Abbreviation of any of the above – 5 points
